

## **Harnessing the Power of Our Waterways: Hydrovolts Flipwing Technology Explained**

In the United States over 500,000 potential sites exist for micro-hydropower according to the US Department of Energy. Equivalent to approximately \$10 billion in lost electricity sales. Why is this? Micro-hydropower is a young technology, efficient but difficult to install and maintain. [Hydrovolts](#), a recent Winner of the Imagine H2O Water-Energy Nexus Competition, has changed that dynamic. Read more about the company's in-stream hydrokinetic turbines with its revolutionary 'flipwing' technology at [InventorSpot](#).
